

CYBERCERTAINTY VULNERABILITY MANAGEMENT

Powered by Forta

WE FIGHT CYBERCRIME. WE PROTECT HUMANITY.

SCALABLE, RISK BASED VULNERABILITY MANAGEMENT

Streamline the identification and prioritization of security weaknesses, enabling efficient IT resource usage to mitigate security risks swiftly and effectively.

REDUCE YOUR RISK AND MANAGE YOUR VULNERABILITIES AND COMPLIANCE

Kivu's CyberCertainty Vulnerability Management service offers the ability to comprehensively scan your IT assets – both within your network and those operating remotely – to identify and prioritize the remediation of vulnerabilities.

Our SaaS based platform, powered by Forta Frontline VM, combines patented scanning technology with an easy to use GUI and asset data correlation to produce fast and accurate results. It's robust features set it apart from other solutions, providing vital security information in a centralized, easily understood format so you can protect business-critical assets and focus on what's important.

Our service gives you access to Kivu's security experts who will work with you to define scans and reporting, as well as, optionally, review results with you. Unlike other service providers, we don't limit when and how you can scan. With our white glove approach to supporting our clients, you get unlimited scans, scanning policies, and reporting. Get the data you need when you need it!

KEY FEATURES OF CYBERCERTAINTY VULNERABILITY MANAGEMENT

✓ **No Limit Scanning**

Scan internally as well as externally, using virtual scanning devices, cloud, and agents as appropriate to your business, workforce location, and IT estate. Our service includes unlimited scans, scan policies, and reporting so you can get the data you need when you need it.

✓ **Threat Landscape**

Threat Landscape combines real-world threat activity and industry-standard severity scores using machine learning to rank threats and vulnerabilities to measure your appetite for risk.

✓ **Security GPA**

A dynamically generated score that delivers an easy-to-understand grade for your company's security posture. As improvements are made, this grade improves, making remediation monitoring and executive reporting easier.

✓ **Active View Dashboard**

Centralized dashboard that tracks, monitors, and reports on remediation activity and progress.

✓ **Simple, Customized Reporting**

Intuitive user-friendly, robust reporting including peer comparison by vertical, business size, or revenue.

✓ **Compliance Auditing**

Understand your configuration compliance to selected criteria before paying for expensive certification audits.

✓ **Smart Labels**

Automatically label your assets so they're easily filterable and dynamically assign business impact to fine tune your prioritization.

KIVU MANAGED SERVICES WHITE GLOVE SUPPORT

Have questions, need help configuring your scans or reports? Better yet, want us to do it for you? Our service experts are available to you 24x7 to ensure you're achieving the security outcomes needed to support your business.
