

KIVU

CYBERCERTAINTY MANAGED NETWORK DETECTION & RESPONSE

Powered by Lumu

WE FIGHT CYBERCRIME. WE PROTECT HUMANITY.

UNCOVER HIDDEN THREATS WITH UNPARALLELED NETWORK VISIBILITY

Real-time detection, analysis, and response to network threats. Find threats across your network that EDR and other security controls can't see.

WHAT IS NETWORK DETECTION & RESPONSE

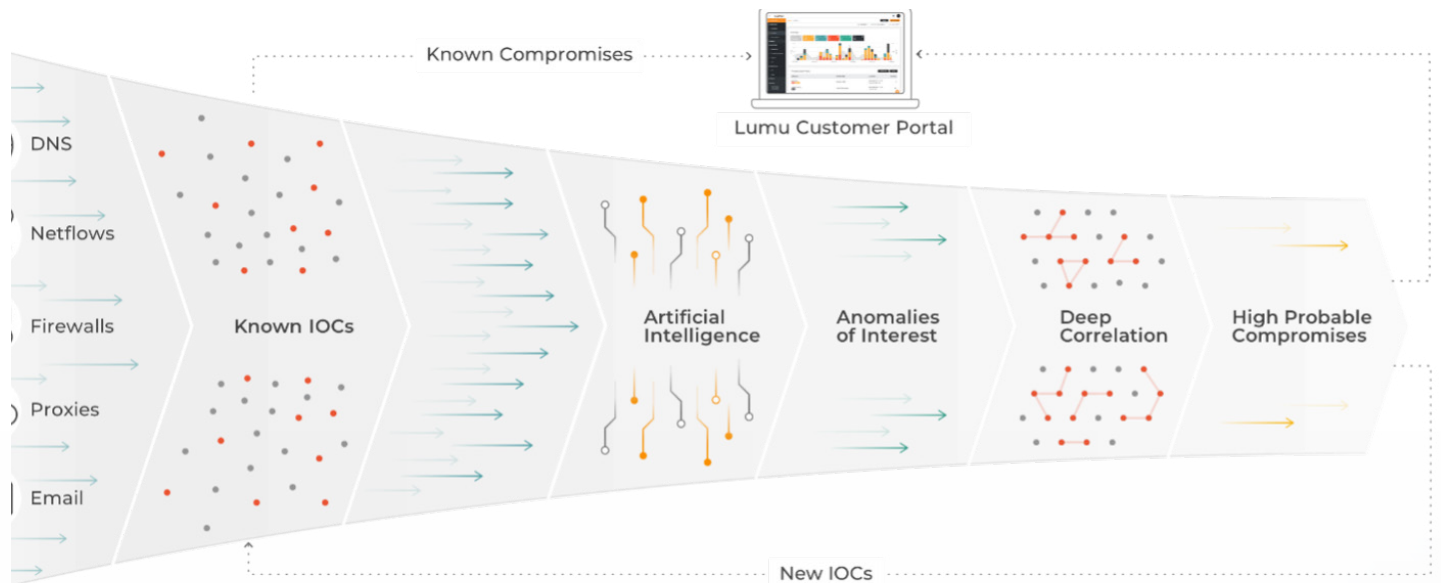

Network Detection and Response (NDR) ingests network metadata from firewalls, routers, switches, cloud networking, endpoints, and DNS. It then sifts through this metadata utilizing a number of processes including threat intelligence and artificial intelligence to identify anomalies and likely security incidents.

Upon identifying a security incident, the NDR automates response via various integrations to block, isolate, or further investigate the extent of the threat.

THE ILLUMINATION PROCESS

Kivu Partners with Lumu to provide managed NDR and bring advanced network analytic capabilities to our clients. The basis for this capabilities lies in Lumu's Illumination Process to drive identification of potential compromises based on network traffic.

KEY FEATURES OF CYBERCERTAINTY NETWORK DETECTION & RESPONSE

- ✓ **Diverse Metadata Ingestion**
Collect network metadata your way. Choose from a wide range of metadata collectors including virtual machines, agents, and APIs.
- ✓ **Confirmed Compromise Intelligence**
Detailed, real-time compromise intelligence on how enterprise assets are communicated with adversary infrastructure.
- ✓ **Compromise Context**
Robust context around confirmed compromises that enables our SOC and your teams to enact the precise response in a timely manner.

KEY FEATURES OF CYBERCERTAINTY CONTINUED

- ✓ **Cloud Based Delivery**
Cloud-based model allows for accelerated deployment and shorter time to value.
- ✓ **Automated Response**
Respond quickly and precisely. Integrate real-time information about confirmed compromises with existing tools via API to enable an orchestrated defense.
- ✓ **Custom & Out-of-the-box-Integrations**
Take advantage of vendor-agnostic integrations, to use Lumu's threat intelligence where it's needed most.

INTEGRATIONS

KIVU MANAGED SERVICES WHITE GLOVE SUPPORT

Have questions, need help configuring your scans or reports? Better yet, want us to do it for you? Our service experts are available to you 24x7 to ensure you're achieving the security outcomes needed to support your business.

CONTACT US

Kivu is a leading global cybersecurity firm that offers a full suite of pre- and post-breach services, specializing in the forensic response to cyberattacks and ransomware incidents. We deliver cutting-edge solutions to organizations worldwide.
